

The Avant Series

The Avant standard kiosk is a highly configurable and compact platform designed to house a wide variety of high-demand transaction components. It can be deployed as a countertop, a pedestal, or with a cash / coin component shroud as the base. The user interface is presented in a 21" zero bezel projective capacitive (PCAP) touchscreen, providing brilliant resolution and precision touch. It features hinged access doors with distinct component integration for simple service and maintenance. As with many of KIOSK's newer models, optional programmable LED lighting provides an attractive and modern accent to draw user attention.

This platform can be configured for several self-service applications including order entry, ticketing, check-in, queuing, and more. The main kiosk head unit houses all computing, payment, scanning, and printing components with an optional camera addition. The lower cabinet can house a bill acceptor / bill and coin dispenser / and bill recycler. The Avant Series is a feature-rich platform that accommodates all payment types (cash, coin, card, NFC), and extends the benefit of self-service to all consumers.

The Avant is an ADA compliant design with secure and tested components.

Contemporary Design and Sophisticated Cash Transaction Capability.
