

Standard Paint Color Selection Guide

When selecting the paint color for your kiosk deployment, it is also important to consider the finish choice. Standard selections are all in a textured semi-gloss finish, which provides a more consistent and polished surface coverage. Textured paint application is recommended for the following reasons:

- The finish is the most fingerprint resistant.
- Texture provides the best coverage, making any minor metal variations undetectable.
- Graphics hold well on all textured finishes for smooth, professional branding appearance.
- Textured paint is the most cost effective process, eliminating any additional preparation steps for the enclosure metals.

CUSTOM COLOR AND FINISH CHOICES:

If you have a custom color or finish in mind, KIOSK Information Systems is readily able to match it / special order it. Please contact a KIOSK Sales Representative at 1-800-509-5471 for a quote.

Keep the following information in mind when selecting custom paint:

- Smooth high gloss or flat finish paints require additional priming steps prior to paint application for a quality end-product. There is an additional fee for these steps. The finish is less “forgiving” and does not completely conceal stud impressions in the metal. Please request a painted metal sample to illustrate final finish expectations.
- Smooth high gloss paints (especially dark colors) show fingerprints and do require more frequent upkeep.

All powder coat paint choices are environmentally friendly and RoHS Compliant. All are industrial quality and applied to withstand years of heavy public use and exposure to the elements.

Exact product offerings may vary from those shown here.
