

Automate & Modernize Patient Check-In

This modern, modular & customizable solution integrates into a workflow to enhance patient experience.

Easily deployable, the solution streamlines patient intake, facilitates visitor management, and automates health & safety screening.

Hardware Features:

- Modern, engaging all-in-one touch computer
- Multiple stand options including floor, counter and wall-mount
- A variety of peripherals including barcode scanner, webcam and payment brackets
- Easily cleaned with common infection prevention wipes
- Custom branding available to support hospital brand identity

General Features:

- Patient check-in, identity & insurance validation, and forms management
- Integrates into all major EHR systems for seamless data flow
- Payment processing and integration into revenue cycle systems
- Wayfinding
- Visitor management: including badge or wristband printing
- Health screening questionnaire

For over 20 years, Agilant has led a wide range of healthcare organizations to make better technology choices — choices that accelerate, transform, and boost patient outcomes. Our end-to-end offerings in digital health, operational transformation, and user experience, combined with high impact pre-sales consulting and lifecycle services, help healthcare organizations deliver personalized, efficient, and informed care.

Technology isn't our day job. It's our passion.

Welcome to Agilant! We bring innovative IT Healthcare Solutions to life.

KIOSK Information Systems – Hardware and Services Provider

www.Kiosk.com

Leading self-service solution provider in North America for 28+ years

Most comprehensive service wrapper in the industry, including:

- Advanced exchange warranty
- Site survey, installation, and complete field services
- Managed services with KIOSK-led remote monitoring and IoT alerting

LifeMedID – Software Integrator

www.LifeMedID.com

- A leader in identity authentication and management since 2009
- Quick, highly customizable approach in dealing with our clients
- Highly workflow focused to help improve operational efficiency and productivity
- Maintains a robust partner network to bring solution to market

Complies with industry best practices around security, PHI data protection, and risk mitigation.

Monitoring and Administrative Capabilities

KIOSK's proprietary remote monitoring software, KNECT IoT, facilitates live data exchanges between the deployed kiosk client and cloud server, providing real-time performance alerts of the elements that drive uptime, customer experience, and your brand reputation in the field:

- System connectivity
 - Status of kiosk applications
 - Component performance and maintenance alert status
- Components include receipt and thermal printers, card and check readers, bill acceptors / dispensers, scanners, card dispensers, and more.

KIOSK Managed Services professionals can provide turnkey remote monitoring and performance reporting, enabling maximized uptime and platform performance.
