The **Patient Services** Series

Automated Healthcare Patient Check-in

Self-service kiosks are an ideal tool for hospitals, doctors' offices, and dental clinics to streamline patient check-in. Patients can leverage a modern and engaging self-service platform to notify staff they have arrived for an appointment and provide the routine pre-appointment data collection independently.

A comprehensive component set is integrated to identify the patient, capture and validate insurance information, and digitize forms management. Secure card reader device options handle payment processing and integration into existing revenue cycle systems. Custom vinyl art supports consistency in hospital branding and awareness.

> **Beginning every patient check in with automated patient eligibility screening saves time, increases payments, and simplifies claims management.**

KIOSK partners with multiple software providers to integrate seamlessly with existing facility workflows and Electronic Health Record (EHR) systems. In addition to patient check-in, some software platforms can provide visitor management, wayfinding, and other services. Your KIOSK sales representative can help determine the right software solution for your deployment.

Key Benefits Include

- Alleviates widespread Administration staffing and labor shortage issues
- Reduces labor costs and administrative errors by eliminating duplicative entry of paper forms
- Reduces fraud by validating patient identity and insurance data as they enter the system
- Improves timely collections and facility profitability by automating collections at the time of service
- Lessens person-to-person contact for improved patient and staff well being
- Improves efficiency of front-line staff
