TAPIT-KIS@KIOSK.COM.

Convenience and customization in the restaurant industry and QSR services are becoming leading differentiators to attract and retain customers. Self-service kiosks, in particular, boost the customer experience (CX) by delivering expediency and personalization from seating to ordering and loyalty tracking at restaurants.

Benefits are even greater for business owners – shorter lines mean more customer traffic and less attrition due to long wait times. Customers can easily apply loyalty programs via credit card use. Order accuracy and customization delivers a better CX, and can actually boost order size. For instance, one industry study discovered that fast food customers spend 30% more when ordering through self-service kiosks¹.

Self-service kiosks are becoming a powerful strategy to improve the CX and bottom line, yet implementing this digital technology can be challenging. The partnership between KIOSK Information Systems and Tapit gives you a seamless solution that makes it easy to segue into self-service. Together, we provide a complete solution including software, hardware, support, and managed services that's flexible and reliable. With exceptional experience and focus on the restaurant / QSR industry, you have access to leading-edge technology and service excellence.

APEX SERIES

19" Pedestal Display

21.5" Pedestal Display

19" Countertop Display

21.5" Countertop Display

To improve your customer experience and increase operational efficiency, the Apex series provides market-ready enclosures to accommodate a wide array of configurations to fit your business needs. This design features a VESA mount LCD that can be configured for a 19-inch or 21.5-inch LCD mounted in portrait or landscape presentation. Enclosure base options include a full-height pedestal for free-standing deployment, or a smaller base option for compact countertop installation needs.

The Apex combines a brilliant Projective Capacitive (PCAP) touch display paired with a flush-mounted PC, providing all-in-one space efficiency. The zero-bezel flush face and minimalist lines complement any foodservice setting to avail your customers greater convenience as well as accelerate operational processes using digital self-service solutions. Apex transaction component options include a side-mounted payment device (multiple), a receipt printer, and a 2D / 3D barcode scanner. All models are ADA compliant.

Components are manufactured by KIOSK's parent company, Posiflex. Because the enclosure metals and components are self-supplied (and stocked), KIOSK can provide attractive pricing and lead-time on this popular design series.

PARAGON TK-3200 SERIES

32" Wall Mount

32" Single Sided Operation

32" Dual Sided Operation

The Paragon TK-3200 Series – an interactive 32" kiosk – performs as an extension of the existing POS terminals to help drive sales during peak times as well as provide efficient order and payment flow. Designed with both functionality and aesthetics in mind, the Paragon TK-3200 Series features a bright, high definition 32" PCAP touch screen within a sleek, durable enclosure, providing a contemporary and sophisticated automated user interface.

This series incorporates a wide range of peripherals in self-service applications including 2D scanner, receipt printer, NFC, status indicator, bracket for EMV payment devices, and more. Furthermore, its modular design makes installation, maintenance and component replacement easy, fast and convenient, and speeds up the return on investment by reducing repair cost.
